

METHOD AND SYSTEM FOR IMPLEMENTING A BROWSER OBJECT CONTAINER

ABSTRACT

A method and system for implementing a browser object container is disclosed. In one  
5 exemplary embodiment, a method for implementing a browser object container comprises the  
steps of identifying content data for inclusion in a browser object container; defining one or more  
navigation options for defining how one or more recipients view the content data as provided by  
the browser object container; adding the content data with the one or more navigation options to  
the browser object container wherein the content data and the one or more navigation options are  
10 embedded into a content definition; compressing the content definition into a compressed file;  
encrypting the compressed file into an encrypted file for securing the content data; and  
electronically transmitting the browser object container containing the compressed and encrypted  
file to the one or more recipients wherein the one or more recipients navigate through the content  
data as allowed by the one or more navigation options within the browser object container.
